EDUCATION

The University of Texas at Dallas

Master of Science, Computer Science - Intelligent Systems

Richardson, TX

Aug. 2026 – Dec. 2027

The University of Texas at Dallas

*Bachelor of Science, Computer Science, **GPA: 3.72***

Richardson, TX

Jan. 2023 – May 2026

- **Relevant Coursework:** Data Structures and Algorithms, Machine Learning, Data Science, Operating Systems, Databases, Automata Theory, Advanced Algorithms

EXPERIENCE

Software Engineer Intern (Capstone Project)

UT Southwestern Medical Center

Feb. 2026 – May 2026

Dallas, TX

- Built a **hybrid RAG pipeline** using vector retrieval and cross-encoder reranking to generate persona-aware patient simulation responses for medical training
- Designed a **synthetic persona generation pipeline** that extracts structured clinical profiles from conversational transcripts to enable real-time simulation
- Developed a **real-time patient simulation system** with structured behavioral metadata tagging to output natural dialogue and structured JSON schema

PROJECTS

EDA Agent | *Django REST, React, LangGraph, Groq, Pandas*

Aug. 2026 – Sep. 2026

- Built an **autonomous EDA agent** using LangGraph and Groq that accepts CSV uploads, investigates datasets across up to 7 self-directed loop iterations, and generates markdown reports
- Architected a separation between **deterministic analysis tools** and LLM orchestration nodes, enforcing one tool call per iteration with structured Pydantic output
- Developed a **full-stack interface** with a Django REST backend and React/Tailwind CSS frontend featuring an expandable agent-trace view and report viewer

KnowledgeAtlas | *Django REST, React, LangChain, Celery, Docker*

Jun. 2026 – Jul. 2026

- Built a full-stack **RAG application** with a Django REST backend and React frontend, using LangChain and Groq to generate grounded, citation-backed answers from PDFs
- Architected an **asynchronous ingestion pipeline** with Celery and Redis, and containerized the full stack with Docker Compose for one-command deployment
- Designed a **vector retrieval system** using ChromaDB and sentence-transformers, building an evaluation harness with a **100% pass rate** across test queries

ExpenseTracker | *Django REST, React, JWT Authentication*

Aug. 2025 – Oct. 2025

- Built **full-stack expense management application** with a Django REST API backend featuring JWT authentication, user registration, login, and CRUD operations
- Implemented **filtering and pagination systems** with real-time search, category-based filtering, and dashboard analytics using Recharts
- Designed UI with React and Tailwind CSS including dark theme design, form validation, and user profile management

TECHNICAL SKILLS

Languages: Java, Python, C++, SQL, PostgreSQL, JavaScript, HTML, CSS

Frameworks: React, Next.js, Django, Django REST Framework, Scikit-Learn, TensorFlow

Developer Tools: Git, VS Code, GitHub, Docker, Claude Code, Cursor

Libraries: Pandas, NumPy, Matplotlib, Axios, Tailwind CSS, LangChain, LangGraph, ChromaDB, Celery, Redis
